

PROJECT SCOPE DOCUMENT

Online Shop Management System

IT 105 – Information Management 1

Group Information:

Project Manager: Sandy Murillo

Database Administrator: Abby Llaguno

SQL Developer: Donalen Grace Rico

QA/Tester: Gabe Arcenal

Documentation Lead: Annaliza Juarez

Security Officer: Eunice Lozano

Project Description

The Online Shop Management System is a database-driven information system that manages customer orders, product inventory, and order processing. The system supports 100,000+ records with full normalization up to 3NF.

Key Functionalities

- 1. Customer registration and authentication
- 2. Product browsing with search functionality
- 3. Order placement with transaction processing
- 4. Order history and tracking
- 5. Admin dashboard for inventory management
- 6. Role-based access control (Admin, Staff, Viewer)

Stakeholders

Stakeholder	Description	Key Needs
Customers	End users purchasing products	Browse, search, order, track
Shop Admins	Manage products and orders	Inventory control, order management
System Admin	User management	Role assignment, access control

ISO %001: 2015
SOCOTEC SCP000722Q

Core Data Processes

Process	Description	Tables Involved
Order Placement	Customer creates order, reduces inventory	Order, OrderItem, Product
Product Management	Add/update/delete products	Product
User Authentication	Login and role verification	User
Sales Reporting	Generate revenue reports	Order, OrderItem

Database Requirements Met

Requirement	How We Meet It
5+ normalized tables	Customer, Product, Order, OrderItem, User
3+ foreign keys	Customer→Order, Order→OrderItem, Product→OrderItem
Many-to-many	Order ↔ Product (via OrderItem junction)
100,000+ rows	Generated via Mockaroo and SQL procedures
ACID transaction	Order placement with rollback on failure
Trigger	Audit log for product price changes
Indexing	On email, category, order_date

Data Volume Requirements

Table	Minimum Rows
Customer	50,000
Product	10,000
Order	30,000
OrderItem	60,000+
User	10

Technologies Used

Component	Technology
Database	MySQL (XAMPP)
Backend	PHP
Fronted	HTML/CSS/JS
Version Control	GitHub
OS	Windows
